A price index with an honest gap

A shutdown a year ago left a hole in October 2025. At 14:30 CET the statisticians publish the month they can measure, not the year they cannot.

At 08:30 in Washington, 14:30 in Berlin, the US Bureau of Labor Statistics publishes the consumer price index for October, together with real earnings for the same month[1]. Everyone has a number ready for it. What almost nobody has is the number people usually quote first: the change on a year earlier. This month it will not be there.

The reason is a year old. During the government shutdown in October 2025, the bureau did not collect prices, so there is no October 2025 index to compare against, and the BLS "can't calculate and will not release" the year-on-year rate this month, Kiplinger reports[2]. Wells Fargo's economists put it plainly: the missing annual rate "will put an even bigger spotlight on the month-over-month changes"[2].

That is the dull machinery at its best. A statistics office could have patched the gap with an estimate and printed a tidy headline. It is choosing to publish what it measured and to say what it did not. You may find that annoying at 14:31. You should find it reassuring by 14:35.

What the forecasters have pencilled in. Economists in a Dow Jones survey expect headline prices to have risen 0.3% in October and core prices, without food and energy, 0.2%, after 0.6% and 0.3% in September[3]. Kiplinger quotes the Bloomberg consensus for the headline at 0.29%[2]. The individual calls are close together but not identical: Wells Fargo estimates 0.28% headline and 0.21% core; UBS 0.26% and 0.23%; Barclays 0.2% for both; RBC 0.3% for both[2]. The common thread is petrol. UBS expects energy goods to add only 0.04 percentage points to the October figure, after 0.39 points in September[2].

Desk arithmetic: a 0.3% rise, if it repeated for twelve months, would compound to about 3.7% a year; a 0.2% rise to about 2.4%. That is not a forecast, only a way to translate a monthly figure into the unit you are used to.

The annual number, by other means. Some forecasters have built their own bridge over the hole. BMO's Sal Gautieri writes that, using the average of the September and November 2025 indexes, the yearly increase would rise to 3.9% from September's 3.7%, and core to 2.7% from 2.6%[2]. Treat that as what it is: one bank's workaround, clearly labelled, not the official rate. UBS adds a warning for the months ahead: because of how the BLS handled last year's shutdown, 12-month changes in housing rents carry an upward bias between October and March[2]. A thermometer with a known error is still a thermometer, as long as you know the error.

Who is reading it. The Federal Reserve raised rates in mid-September for the first time in three years, then paused in late October, saying inflation "remains elevated"[2]. Its next decision is due on Wednesday 9 December[2]. Barclays, Wells Fargo and BMO all say they expect another rise in December, and Barclays reads October's statement and its two dissents as setting one up[2]. That is their view, and a single calm month will not settle it: BMO's Gautieri writes that the committee "won't take much comfort from just one calm CPI report"[2].

Tokyo is reading too. The Bank of Japan's summary of its 29–30 October meeting, released this morning, quoted one of the nine board members saying the bank "should decide on the next policy interest rate hike when it is possible without becoming overly cautious"; Bloomberg reads the summary as a good chance of a December move[5].

Your money this morning. Markets have spent the night in a better mood. Brent was 0.9% lower at $91.74 a barrel early on Tuesday[4], after settling at $92.57 on Monday[3]. The euro was at $1.1222, down from $1.1266, and the dollar at 158.06 yen[4]. Gold futures were 0.22% higher at $4,123.50 an ounce[3]. None of these prices knows what 14:30 will say.

What to do with it. If you hold dollars, a dollar mortgage, or simply a view, read the monthly figures first, then the core, then the energy line. Ignore any headline that quotes an annual rate for October as if the bureau had published one; it will not have[2]. Producer prices for October follow on Friday at the same hour[1].

The quiet virtue here is not in any forecast. It is in a calendar kept, a release published on time, and a gap admitted rather than plastered over. Nothing here is investment advice.

Whole piece in reading view →

WHAT TO WATCH

- 14:30 CET today: US consumer prices and real earnings for October, both from the Bureau of Labor Statistics.
- Friday 13 November, 14:30 CET: US producer prices for October.
- Wednesday 9 December: the Fed's next policy decision.

DESK COMMENT

A statistic that admits a gap is worth more than one that fills it quietly.

GEO-ECONOMICS · 2 MIN

325 transits in a week: Hormuz is slow, not shut, and the counters disagree

Washington says it will hold off on new strikes against Iran but keep the blockade. The shipping logs say the strait is running at about a third of normal.

The UK Maritime Trade Operations centre counted 170 outbound and 155 inbound transits through the Strait of Hormuz in its latest weekly report, Gulf News reports, about 65 percent below pre-conflict levels[1]. Desk arithmetic: 325 crossings in a week. Most ships with transponders switched on use the northern route along the Iranian coast[1]. UKMTO's own summary: "well below normal but not stalled"[1].

Three counters, three answers. The Joint Maritime Information Center sees single-digit to low double-digit daily transits on independent tracking; US naval coordination data recorded about 30 US-facilitated transits a day from 5 to 7 November, which UKMTO says it cannot independently verify[1]. Many ships switch off their transponders, so traffic is likely undercounted[1]. The disagreement is not a scandal; it is method, and it is worth knowing which number a headline uses.

The damage ledger. At least 11 ships were attacked in and around the strait in the week to 6 November, and three sank[1]. UKMTO has recorded 88 projectile strikes since hostilities resumed in early July and says most attacks go unreported; the JMIC counts 177 incidents since 1 March and keeps its threat level at "severe"[1]. On Monday UKMTO logged another tanker "attacked" off Khasab, Oman, with its crew evacuated[1]. US Central Command says its blockade has redirected 147 vessels since July and disabled five that refused to comply[1].

The politics. President Trump said on Monday he plans to hold off on new military strikes against Iran for the time being, after appeals from countries in the region, and to keep the naval blockade in place for now[2]. Markets took that as relief; the shipping data has not yet had a week to show whether it means anything at sea[2,1].

For you, the strait arrives as freight rates, insurance premiums and, months later, prices on shelves. The useful habit is to watch the weekly counts, not the speeches.

WHAT TO WATCH

- The next UKMTO weekly transit count, and whether the JMIC keeps its threat level at "severe".
- Whether the pause on new US strikes holds while the blockade stays in place.

DESK COMMENT

A strait is not open or closed. It is a ledger of ships, and the ledger is still being written.

G7 in Paris: no communiqué needed to agree on coercion

Foreign ministers restated the old line on force and the newer one on export restrictions. Europe's seat at the Ukraine table remained the open question.

The Group of Seven foreign ministers opened their fourth in-person meeting of the year in Paris on Monday, NHK reports[1]. They reaffirmed their opposition to unilateral attempts to change the status quo by force or coercion in the East and South China Seas and the Taiwan Strait[1].

The economic line is the one to keep. Ministers agreed to cooperate in countering market-distorting policies and practices, arbitrary export restrictions and economic coercion[1]. They also agreed to work together against cybercrime such as cryptocurrency theft, and restated the commitment to North Korea's complete denuclearisation under UN Security Council resolutions[1].

None of this is new in wording. …

GEO-ECONOMICS · BRIEF · EPAPER EXTRA, ADDED 06:30 CET

OPEC back to 90 percent of February, and a pipeline that kept running

OPEC crude output rose by 1.38 million barrels a day in October to 22.87 million, a Reuters survey found, led by Saudi Arabia, Kuwait and Iraq; that is about 90 percent of the 25.48 million pumped in February, before the war, OilPrice.com reports[1]. A Bloomberg survey put October at 22.8 million[1]. Iran's output fell to 1.9 million barrels a day, the lowest in that survey's data back to 1989[1].

On the same day, Saudi Arabia's East-West pipeline, its main route around the Strait of Hormuz to the Red Sea port of Yanbu, was targeted in the Medina region; an Energy Ministry official said a limited fire was put out with no casualties and no disruption to operations[1]. OPEC+ ministers meet on 29 November to set 2027 targets[1]. Nothing here is investment advice.

MARKETS & MACRO · PODIUM VS PRINT · 2 MIN

Podium vs Print: "highly unlikely" and $91.74

A president told a television channel that new strikes on Iran were unlikely if talks progress. By Tuesday morning the barrel and the Asian screens had given their answer, and the secretary of state had added a footnote.

PODIUM

“A resumption of strikes on Iran is "highly unlikely" if the United States sees progress in negotiations toward ending the war (as reported by AP; quotation marks around his words only)”

Donald Trump, President of the United States, speaking to CNN, Over the weekend of 7–8 November 2026, as reported by AP on Tuesday 10 November

PRINT

$91.74 a barrel

Down 0.9% early on Tuesday, after settling at $92.57 on Monday, down $5.75 or 5.85%.

Brent crude, the international benchmark, as reported by AP, Early Tuesday 10 November 2026, Asian trading

The podium. Over the weekend Donald Trump told CNN that a resumption of strikes on Iran is “highly unlikely” if the United States sees progress in negotiations toward ending the war, AP reports[1]. It was a conditional sentence, and the condition matters: “if” carries most of its weight.

The print. The oil market took the sentence at face value first and read the condition later. Brent settled at $92.57 on Monday, down $5.75 or 5.85%, and US crude at $86.85, down 4.38%[2]. Early on Tuesday Brent slipped another 0.9% to $91.74 and US crude 1% to $85.97[1]. Asia followed Wall Street higher. At 04:28 CET, Kaohoon International had Seoul’s Kospi up 4.46%, Tokyo’s Nikkei up 2.89% at 60,475.78 and Shanghai up only 0.14%[2].

MARKETS · ASIA

Tuesday morning in Asia: Seoul ran, Shanghai walked

Percentage change on selected Asia-Pacific indexes, Tuesday session, 10 November 2026, 10:28 Bangkok time (04:28 CET), per Kaohoon International

▶ Data table

Source: Kaohoon International, 'Asia-Pacific Markets Rise on Tech Recovery and Easing Energy Prices, Investors Eye US Inflation Data', levels at 10:28 Bangkok time (04:28 CET), 10 Nov 2026; intraday snapshot, not closing levels; retrieved 10 Nov 2026 · reported figures · CSV

The gap. The footnote came from the same government. Secretary of State Marco Rubio said on Sunday that Iranian demands had sometimes been “outrageous and ridiculous”[1]. So the podium spoke with two voices, and the print chose the softer one. That is not irrational: a barrel prices probabilities, and a lower chance of strikes is worth something even before any deal exists. Seoul and Tokyo were led by chipmakers and AI names[1]: oil was the tailwind, not the engine.

What the speech left out. The households. In the same Asian morning, Japan reported that household spending fell 6.8% on the year in September, against a 3.1% fall expected, its tenth monthly decline in a row[3]. Desk arithmetic: Monday’s figures imply a Friday settle of $98.32 ($92.57 + $5.75), so Tuesday’s early $91.74 is $6.58, or about 6.7%, lower. …

WHAT TO WATCH

- 14:30 CET: US consumer prices for October, the first test of whether cheaper oil reaches the shop till.
- Any official word from the negotiations themselves, as opposed to interviews about them.

DESK COMMENT

A sentence moves a price once. Only a signature keeps it there.

MARKETS & MACRO · BRIEF · EPAPER EXTRA, ADDED 06:30 CET

The fear gauge fell 22%, gold edged up

The VIX, the index of expected volatility on the S&P 500 often called Wall Street's fear gauge, fell 22.31% on Monday to 19.92[1]. That is the market saying it expects calmer weeks than it did on Friday; it is not a promise. Gold futures, meanwhile, added 0.22% to $4,123.50 a troy ounce on Tuesday morning[1]. Desk arithmetic: a fall of 22.31% to 19.92 implies the VIX stood near 25.6 before Monday. The next test of that calm is scheduled, not random: US consumer prices for October at 14:30 CET[1]. Nothing here is investment advice.

POLITICS & INSTITUTIONS · 2 MIN

€1.4 billion of room and about €10 billion of wishes: the budget's last 48 hours

Before Thursday's committee session, the coalition is haggling over a plastics tax, a sugar tax, a children's top-up and an electricity tax cut. The arithmetic is less dramatic than the noise, and tighter.

The coalition has until Thursday. That is when the Bundestag's Budget Committee begins its final "Bereinigungssitzung" on the 2027 budget, which traditionally runs into the early hours of Friday[3]. Bild reported a Monday-evening mediation meeting of the two parliamentary group leaders, Thorsten Frei (CDU) and Matthias Miersch (SPD), Merkur writes[3]; no result had been reported by the time this edition closed.

The frame. The draft plans core spending of €555.4 billion and new core borrowing of €118.7 billion; including the special funds for the armed forces and infrastructure, new borrowing reaches €203.7 billion[1]. The autumn tax estimate brings the federal government about €3.9 billion more, but the debt brake lets it borrow €2.5 billion less because the economic forecast improved, leaving about €1.4 billion of extra room on paper[1].

The wish list. The plastics tax would raise about €670 million in 2027 and about €1.5 billion a year from 2028[1]. "Die Plastiksteuer machen wir nicht," Frei said on ZDF ("We won't do the plastics tax")[1]. The sugar tax, worth about €690 million next year, looks likelier to come, though parts of the Union want to delay it to 1 January 2028[1,2]. The Union wants an electricity tax cut for everyone and a further offset of bracket creep, each costing about €5 billion, with no counter-financing[1]. The SPD wants to keep the €25 children's top-up and avoid housing-benefit cuts, about €770 million together[1,3]. Environment Minister Carsten Schneider said the Union now has to propose "wie wir das Loch im Haushalt schließen" ("how we close the hole")[2].

The year that matters. The finance ministry's own figures show an uncovered gap of about €25 billion in 2028, €40 billion in 2029 and €50 billion in 2030, about €115 billion in total[1]. Every permanent tax cut agreed this week lands in those years.

For you, the headlines will be about plastic and sugar. The line to read on Friday morning is the one that says how each new promise is paid for.

WHAT TO WATCH

- The Budget Committee's final session starts on Thursday 12 November and traditionally runs into the early hours of Friday.
- Whether the plastics tax survives, and what replaces it if not.

DESK COMMENT

A budget is a list of promises with prices next to them. The prices are the honest part.

POLITICS & INSTITUTIONS · SHORT ITEM · EPAPER EXTRA, ADDED 06:30 CET

Merz receives Magyar: six months of a different Hungary, measured in euros and gas

Hungary's prime minister is in Berlin with four ministers. Brussels has released €4.2 billion; €12.4 billion is still being checked.

Chancellor Friedrich Merz receives Hungary's prime minister Péter Magyar at the Chancellery today: a one-to-one talk, then a working lunch with ministers from both sides on Europe, defence, economic cooperation and support for Ukraine, and a joint press conference planned for about 13:30 CET[1,2]. Magyar's Tisza party won April's election and ended 16 years of Fidesz government under Viktor Orbán; he has led a pro-European government since May[1].

The delegation brings the foreign, economy and energy, defence and interior ministers; Germany remains Hungary's main trading partner[3]. …

"No negotiation show": Wadephul's line before Abu Dhabi

"For Europe, it is clear: we do not need to establish a new security architecture for Europe," German Foreign Minister Johann Wadephul said on Monday, according to AFP[1]. He urged Moscow to "give up maximalist demands" and warned against a "negotiation show" in Abu Dhabi[1]. After meeting Marco Rubio at the G7 in Paris he added: "Europe belongs at this table"[2].

Berlin's leverage here is not volume but presence: officials from the UK, France, Germany and Italy, plus NATO and the EU, will hold separate talks with Ukraine's delegation in Abu Dhabi, its chief negotiator Rustem Umerov said[1]. The Kremlin says the negotiations stay "trilateral"[1].

PSYCHOLOGY & BEHAVIOUR · 2 MIN

The Annex: 491 families, four waves, and a link that only showed up at month 18

A Syracuse study of authoritarian parenting separates differences between families from changes within one teenager. The two levels tell different stories, and the method is the point.

The Annex reads the method behind the headline. This week's paper, in the Journal of Research on Adolescence and summarised by PsyPost, asks whether strict, punitive parenting with little warmth goes with teenagers' beliefs that rule-breaking and aggression are acceptable, and with anxiety and depression[1].

The design. Wusirige, a PhD candidate at Syracuse University, with Bo Jian and Gabriel J. Merrin, used 491 US adolescents and one parent each from the AmeriSpeak Panel, a randomly recruited survey panel[1]. Families answered four waves about six months apart between November 2021 and summer 2023; teenagers averaged about 15.3 years at the start, and 71.3% of responding parents were mothers[1]. Parents rated authoritarian practices once, at wave 1, on a 0-to-4 scale; teenagers reported anxiety, depression and agreement with statements such as "Some kids deserve to be picked on" at waves 2 to 4[1]. Participation fell from 413 at wave 2 to 364 at wave 4[1].

The trick. A random-intercept cross-lagged panel model separates two questions: do teenagers from stricter homes differ on average from others (between-person), and does a given teenager rise above their own usual level (within-person)[1]? Headlines usually blur them.

The results. Between families, more authoritarian parenting went with modestly higher stable levels of antisocial thinking, but not with average anxiety or depression[1]. Within teenagers, nothing showed up at waves 2 and 3. At wave 4, about 18 months after the parenting survey, earlier authoritarian parenting was associated with rises in anxiety and depression above each teenager's own baseline; the depression link sat right at the threshold of significance[1]. No differences between boys and girls were significant[1].

Continue in reading view →

WHAT TO WATCH

- Whether follow-up work measures parenting more than once, so changes in parenting can be tested against changes in teenagers.
- Studies that include more fathers and other caregivers, which the lead author calls for.

DESK COMMENT

An average describes a crowd. Your child is not a crowd.

PSYCHOLOGY & BEHAVIOUR · SHORT ITEM · EPAPER EXTRA, ADDED 06:30 CET

Too much order: 70 adults, a scanner, and ADHD as a question of where the brain sits

A Helsinki study suggests ADHD symptoms track a shift towards overly synchronised brain activity. A promising frame, a small sample, and no single pattern that sorts people neatly.

The idea is called brain criticality: the brain may work best near a tipping point between activity that is too disorganised and activity that is too synchronised[1]. Hamed Haque of the University of Helsinki and colleagues tested whether ADHD symptoms reflect a shift towards the synchronised side, in a study published in Translational Psychiatry[1].

They recorded 70 adults with magnetoencephalography, 36 neurotypical and 34 with an ADHD diagnosis, at rest and during two attention tasks; those with ADHD paused medication for 24 hours[1]. …

PSYCHOLOGY & BEHAVIOUR · BRIEF · EPAPER EXTRA, ADDED 06:30 CET

83% in one group, 70% in the next: a brain signature for cocaine use disorder

Researchers led by Kanhao Zhao and Yu Zhang of Lehigh University trained a model on resting brain scans of 129 people in Mexico, 71 with cocaine use disorder and 58 without; it told the groups apart with 83% accuracy[1]. On an independent group of 82 patients and 81 controls from the US and Mexico, accuracy fell to 70%, but the same connectivity differences reappeared[1]. In a small trial of 45 patients, 25 given active magnetic stimulation (rTMS) and 20 a sham, the signature predicted craving reductions only in the active group[1]. The study is in Nature Mental Health[1].

The drop from 83% to 70% is the honest number: that is what replication looks like. The samples were mostly male, the sites varied, and the design cannot say whether the pattern causes the disorder or follows from it[1]. A screening tool is a hope for later, not a test you can book[1].

ENERGY & INDUSTRY · BRIEF · EPAPER EXTRA, ADDED 06:30 CET

Four substations hit, and an EU fast lane for grid repairs

Russian forces targeted four electrical substations in the Kyiv, Dnipropetrovsk, Cherkasy and Vinnytsia regions, Russia's defence ministry said on Monday[1]. The Guardian describes the strikes as part of a campaign to deny Ukrainian civilians heating, light and running water as winter approaches[1].

The answer came in the dull language of administration. President Zelenskyy said the EU had agreed to activate a special emergency mechanism that speeds up funding for power-grid repairs[1]. Transformers, cables and crews are bought with invoices, and invoices need a budget line that clears quickly. That is what a mechanism is for.

This desk's lead is on page 3: A price index with an honest gap.

Japan's surplus nearly halved, and the yen at 158

September's current-account surplus came in at ¥2,372.3 billion, well below forecasts. The currency barely moved; the ledger did.

Japan's current-account surplus, the broadest measure of what the country earns from the rest of the world, fell to ¥2,372.3 billion in September from ¥4,375.8 billion a year earlier, NDTV Profit reports; markets had expected ¥3,354.4 billion[1].

Desk arithmetic: the September surplus is about 54% of last year's, a fall of roughly 46%, and about ¥982 billion short of the forecast.

The yen hardly flinched. The dollar rose to 158.06 yen early on Tuesday from 157.90[2]. Currencies respond to many things at once, and this morning the louder signal came from the Bank of Japan's summary of its October meeting, in which one board member said the next rate rise should come "when it is possible without becoming overly cautious"; Bloomberg reads that as a good chance of a December move[3].

Why it matters to you even if you never hold yen: a country that earns less abroad and whose households are spending less at home is one where the central bank's next step is genuinely hard. That is a reason to watch the institution's own records, published on schedule, rather than any confident prediction about what it will do. Nothing here is investment advice.

MONEY, FX & COMMITTEES · BRIEF · EPAPER EXTRA, ADDED 06:30 CET

The week's calendar: prices today, a holiday Wednesday, producers Friday

Today at 14:30 CET the US Bureau of Labor Statistics publishes consumer prices and real earnings for October[1]. Wednesday is Veterans Day in the US, a federal holiday on the bureau's calendar[1]. On Friday 13 November, again at 14:30 CET, come US producer prices for October[1]. Germany's next ZEW economic-sentiment reading follows on Tuesday 17 November at 11:00[2]; October's stood at plus 28.1 points, down from the month before[3]. A calendar is the most underrated document in finance: it tells you when to pay attention, and, just as usefully, when not to. Nothing here is investment advice.

ORDINARY & INHERITED LIFE · 2 MIN

Ordinary Ledger: 71% say heat pump, 80% say the price is the problem

A ZEW survey of 2,551 energy advisers and installers finds the technology is not what holds households back. The bill, the budget and the changing rules are.

If you are wondering what to put in the cellar when the old boiler gives up, the people who advise on it have a clear favourite. In a nationwide survey of 2,551 energy experts in 2026, the ZEW in Mannheim found they had recommended a heat pump in an average of 71% of cases in 2025[1]. Among heating installers, heat pumps made up 57% of the systems they actually installed[1]. In a separate experiment with realistic advice scenarios, the heat pump was recommended in about two-thirds of cases[1].

The interesting part is what the experts say stops people. Not the machine: only 4% name poor product quality as an obstacle. Instead, 80% cite high investment costs, 74% frequent changes to the legal framework and 72% customers' lack of money[1]. Co-author Kathrine von Graevenitz says customers care above all about investment and long-run total costs and enough heating output (desk translation)[1].

Your house decides more than your intentions. A lower energy need of 70 rather than 120 kilowatt-hours per square metre raised the probability of a heat-pump recommendation by 24.5 percentage points; a high need of 200 kilowatt-hours lowered it by 32.7 points; underfloor heating instead of radiators raised it by 19.8 points[1]. The age and income of the household and the year the building went up also mattered[1]. And advisers did not always agree: in comparable situations, they sometimes reached different recommendations, co-author Bettina Chlond notes[1].

On prices, more than 90% of the experts expect natural gas to be dearer over the next five years, while more than half expect heat-pump electricity prices to stay the same or fall[1]. That is their expectation, not a guarantee, and it is worth hearing precisely because these are the people who see the invoices.

The ordinary lesson: before you ask "heat pump or not", ask what your house uses per square metre, and get a second opinion if the first one arrives too quickly. Stable rules would help everyone; a second quote helps you today.

WHAT TO WATCH

- Whether the next changes to heating rules come with a long, fixed timetable; 74% of the experts name frequent rule changes as a barrier.

DESK COMMENT

A good boiler decision starts with the house, not the headline.

ORDINARY & INHERITED LIFE · SHORT ITEM · EPAPER EXTRA, ADDED 06:30 CET

Japan's households spent 6.8% less: the tenth fall in a row

September's figure was more than twice as weak as economists expected. Behind it is the oldest story in economics: prices and borrowing costs rising faster than pay.

While Tokyo's stock market rose almost 3% on Tuesday morning, Japan's kitchens told a different story. Household spending fell 6.8% on the year in September, against a 3.1% decline expected by economists, NDTV Profit reports[1]. It was the tenth monthly fall in a row and the steepest since September 2020, as inflation and higher borrowing costs weighed on household budgets[1].

The same morning, the Bank of Japan published the summary of its late-October meeting. One of the nine board members said the bank "should decide on the next policy interest rate hike when it is possible without becoming overly cautious", and Bloomberg reads the record as a good chance of a December move[2]. …

Australian consumer mood at 78.2, its lowest since November 2022

Australia's Westpac–Melbourne Institute consumer sentiment index fell 2.7% on the month to 78.2 in November, its lowest level since November 2022, NDTV Profit reports[1]. It is the third monthly fall in a row, after a 4.7% drop in October[1]. The reasons are familiar to anyone with a variable-rate loan: persistent cost-of-living pressure and higher borrowing costs, which weigh on mortgage affordability[1]. The same morning, Australia's main share index rose about 1%[1]. A share index tells you how investors feel about companies; a sentiment survey tells you how people feel about their kitchens. Both deserve a place on your screen.

TECH & COMPUTE · 2 MIN

SoftBank reports at 07:30 CET, and the only number that matters is a valuation

The shares jumped about 15% in Tokyo before the results. What the filing will really show is how a $64.6 billion stake in OpenAI was marked, and with whose money it was bought.

SoftBank Group reports its second-quarter results at 06:30 GMT, 07:30 in Berlin, Reuters says, as relayed by Startup Fortune[3]. Its shares did not wait: they jumped 15% in Tokyo on Tuesday ahead of the release, AP reports, after falling to their lowest level in a year on Monday[1]. Reuters had the stock down 4.2% on Monday, 11% on Friday and 23% for the year[3].

The reason everyone watches is a single holding. On 1 October SoftBank paid the third and last $10 billion tranche of its follow-on investment in OpenAI, taking its cumulative investment to $64.6 billion for a stake of about 13%[2]. It funded that tranche with foreign-currency bonds, and says that all borrowings under its $40 billion bridge facility have been repaid, with no undrawn commitments left[2]. That is the tidy part of the ledger, and worth noting: a bridge that was meant to be temporary was, in fact, temporary.

The less tidy part is the rest of the balance sheet. At the end of June, net interest-bearing debt stood at 10.8 trillion yen, about $68 billion, up from 6.6 trillion yen a year earlier, Startup Fortune reports, and the cost of insuring the group's debt has reached a four-year high[3]. Analysts' forecasts for the quarter range, per Reuters, from a profit of 233 billion yen to a loss of 113 billion yen[3]. A range that wide tells you the result will depend on how holdings are marked, not on anything sold.

There is one sober voice inside the group worth hearing. Junichi Miyakawa, chief executive of the mobile arm SoftBank Corp., told investors that "the major developments in the US are not going to work particularly to our advantage", and that if conditions worsen sharply "we may launch in other countries first", Bloomberg reported[3]. His own unit's cloud and AI revenue still rose 37% in the half-year[3].

For you, the useful habit this morning is the old one: read the valuation note before the headline profit, and the debt table before either. A mark-to-market gain is an estimate signed by auditors; interest is an invoice. Nothing here is investment advice.

WHAT TO WATCH

- 07:30 CET today: SoftBank Group's results for the quarter to 30 September, and the value it puts on its OpenAI stake.
- Whether the group says how it will fund further commitments after October's payment.

DESK COMMENT

In a holding company, the profit is an opinion and the debt is a fact.

Sixteen capitals, one missed deadline: the AI Act still needs its enforcers

Before Friday's first EU leaders' meeting on AI in Dublin, the duller question is who in each country will actually enforce the law already passed.

The EU's 27 leaders meet in Dublin on Friday for their first joint meeting on artificial intelligence, POLITICO reports[1]. The speeches will be about speed. The paperwork is about slowness.

Under the AI Act, each member state had until August 2025 to appoint a national authority to enforce it. Six countries, Austria, Belgium, Bulgaria, Croatia, Slovakia and Hungary, have not selected one, and ten more have only a provisional decision that still needs adopting, the Commission confirmed to POLITICO[1]. That makes 16 capitals short of the finish line.

The infrastructure side has slipped too. …

Google splits its AI chip in two, and brings AMD into the secure one

Google has unveiled two variants of its Tensor Processing Units, India Today reports[1]. The TPU 8tx is aimed at confidential computing for governments and regulated industries, and pairs Google's chip with an AMD processor so that data and models stay encrypted at hardware level while being processed. The TPU 8i Max packs two TPU chips into one unit for double the memory and computing power[1]. Google's chip chief Amin Vahdat says the future lies in specialisation[1]. Bloomberg Intelligence projects TPU sales rising from roughly $12 billion this year to over $135 billion by 2028, the report says; every TPU Google makes is currently contracted to a buyer[1]. The quieter point: buyers who want a second supplier now have one more option, and competition is the cheapest regulator there is.

No licensed vaccine, 165 million infections, and a Shigella candidate that passed its first real test

Valneva's tetravalent Shigella shot met its primary endpoint in a challenge trial and raised antibodies in Kenyan infants. Phase 2 is a gate, not a finish line, and the company says so itself.

Shigellosis does not make the evening news in Europe, which is part of the problem. It is the second leading cause of fatal diarrhoeal disease worldwide, with an estimated 165 million infections a year, about 62.3 million of them in children under five, and up to 600,000 deaths[1]. Treatment is mostly oral rehydration and antibiotics, and resistance is spreading. There is no licensed vaccine[1].

On Monday the French vaccine maker Valneva reported Phase 2 results for S4V2, a four-strain bioconjugate candidate; LimmaTech sponsored both trials[1]. The first trial, in Kenya, gave 110 nine-month-old infants two doses at one of two dose levels, against a meningococcal control vaccine[1]. Antibodies rose significantly against all four targeted Shigella serotypes compared with the control group, peaked after the second dose and were still above baseline six months later[1]. Side effects were mostly mild to moderate and did not differ statistically from the control group[1].

The second trial is the more striking design. About 120 healthy adults in the United States, with no prior Shigella antibodies, received two doses or placebo a month apart and were then deliberately exposed to a strain of *S. sonnei* about a month later[1]. The trial met its primary endpoint: a statistically significant reduction in shigellosis from that serotype in the vaccinated group[1]. The release gives no efficacy percentage; further analysis is ongoing[1].

Read the caveats, because the company wrote them. The infant data highlight “the need for further evaluation of dose selection and vaccination scheduling”, and Valneva’s chief scientific officer, Hanneke Schuitemaker, speaks of results that underline “the need for further clinical evaluation and optimization”[1]. …

Continue in reading view →

WHAT TO WATCH

- The design of the next clinical step, which Valneva says it will decide after assessing the full infant and challenge datasets.
- Whether the dose and schedule questions raised by the infant trial are answered before any larger efficacy study.

DESK COMMENT

Most medicine that matters arrives as a modest press release about a second phase.

A flu shot into the tumour: 18 patients, seven shrinking, and no comparison group

An Ohio State team injected an ordinary flu vaccine into operable melanomas. The signal is interesting; the design is a first look, and the researchers' peers say exactly that.

Doctors at the Ohio State University Wexner Medical Center treated 18 patients whose melanoma could be removed surgically with something every pharmacy stocks: a standard flu vaccine[1]. Patients first had the jab in the arm; a couple of days later, and again 12 days after that, the same vaccine was injected directly into the tumour, for most patients at about three times the usual dose[1]. No serious side effects emerged[1].

Two weeks later surgeons removed the tumours. Most samples were packed with immune cells, and blood tests suggested the immune system had switched on[1]. …

Japan's own COVID vaccine gets its new strain for the 2026/27 season

Japan has approved a partial change to the authorisation of Shionogi’s COVID-19 vaccine COVGOZE, switching its antigen to Omicron LP.8.1, the recommended strain for the 2026/2027 season, the Osaka company said on Monday[1]. Shionogi says it is preparing to supply the vaccine in fiscal year 2026[1].

COVGOZE is a recombinant-protein vaccine, developed and made in Japan, using insect cells to express the antigen protein, which is then purified[1]. The company points out that the same family of technology has long been used for influenza vaccines[1].

For you, the interest is in the plumbing. A strain change approved as a routine “partial change” is what a mature vaccine system looks like: a recommended strain, a manufacturer that updates, a regulator that signs off, a season that starts on time. More than one technology and more than one supplier is resilience, not redundancy.

SECURITY & ORDER · 2 MIN

Abu Dhabi, day one: security architecture first, borders later

Russia, Ukraine and the US meet today for the first time since February. The American plan is to talk about hotlines before maps. Low expectations are the sensible kind.

Negotiators from Ukraine, Russia and the United States meet in Abu Dhabi today, the first such trilateral round since Geneva in February, AFP reports[2]. Reuters describes two days of talks[4]. Neither Vladimir Putin nor Volodymyr Zelenskyy attends; US envoys Steve Witkoff and Jared Kushner host[2].

The sequencing. A US official told reporters that Moscow and Kyiv had privately shown "a little bit of flexibility" on who controls Ukraine's east after the war, the BBC reports, but added: "They will not solve the Donetsk issue and the territorial issue until they know what the security architecture is going to be after the war"[1]. The framework floated by US officials includes security consultations, crisis-communication hotlines, "reciprocal de-escalation measures" and reactivating the NATO-Russia Council, largely paused since 2022[1]. Kushner wrote that the round could at most "build momentum toward the next phase of negotiations"[1].

The gap. Publicly, nothing has moved: Moscow demands that Ukraine give up the parts of Donetsk it still holds; Kyiv wants to freeze the contact line[1,2]. A senior Ukrainian official told AFP: "We don't have any particular expectations"[2]. Sergei Ryabkov, the diplomat who issued the ultimatum on NATO troops in eastern Europe shortly before the 2022 invasion, joins Russia's delegation for the first time[2]. On the eve of the talks Zelenskyy said battlefield results "strengthen us in negotiations"[3].

Europe's chair. The US official said Washington would propose a multilateral format bringing Europeans in, while acknowledging Russian reluctance[1]. The Kremlin says the talks remain "trilateral"[2].

For you, the useful posture is the dull one: count what is agreed in writing, not what is said in interviews. A hotline is not a peace. It is the kind of small, checkable machinery from which one can be built.

WHAT TO WATCH

- Whether the Russians accept the US proposal to move to a multilateral format that includes Europeans.
- The separate meetings of Ukraine's delegation with British, French, German, Italian, NATO and EU officials in Abu Dhabi.

DESK COMMENT

Peace is not signed in a room. It is built afterwards, by people who answer the hotline.

412,576 death certificates: what a leaked Russian register says, and what it cannot

Hackers say they took the data from Rosstat. The Guardian could not verify all of it, but the figure is broadly in line with other estimates. Rosstat denies sensitive data was taken.

More than 400,000 Russians have been killed fighting in Ukraine since February 2022, according to data the Guardian says was leaked from Russia's state statistics agency, Rosstat[1]. The material, obtained by the Belarusian opposition-linked hacker group Cyber Partisans and the Ukrainian collective Silent Crow, contains more than 11 million death certificates; 412,576 of them explicitly link the death to the war, through cause-of-death codes or written references to combat[1].

The caveats come first. The Guardian could not independently verify the whole dataset; Rosstat confirmed it had been hacked but denied that sensitive information was obtained[1]. …

SECURITY & ORDER · BRIEF · EPAPER EXTRA, ADDED 06:30 CET

A refinery near St Petersburg and a rocket-fuel plant: Ukraine's long reach before the talks

A long-range Ukrainian drone attack started a fire at the KINEF oil refinery near St Petersburg, one of Russia's largest, Leningrad regional governor Alexander Drozdenko said on Monday[1]. Ukraine's general staff said its forces also struck a plant near the city that produces solid rocket propellant for Russia's Iskander-M ballistic missiles[1].

Zelenskyy said the long-range strikes, including on oil-industry sites, were also working, the Guardian reports[1]. The same night, Russia hit a warehouse in Odesa holding food for kindergartens and schools, killing three people, local officials said[1]. Damage assessments from such strikes take days; the first claims are a starting point, not a balance sheet.

CLIMATE & WEATHER · 2 MIN

1.47°C to September, a supersized El Niño, and the first El Niño health emergency

The WMO's State of the Climate update lands on COP31's doorstep. Read it as an invoice that has already been issued, not as a speech.

The World Meteorological Organization published its State of the Climate Update 2026 on Monday, timed for the COP31 talks in Türkiye[1]. Strip away the adjectives and it is a ledger. The global average surface temperature from January to September was about 1.47°C above the pre-industrial average[1]. The past 12 years have each been among the warmest on record, and the past four top the list; 2026 is on track to be one of the four warmest[1].

The driver for the coming months is El Niño, building since August and expected to be the strongest on record by December[1]. WMO Secretary-General Celeste Saulo put the physics plainly: “El Niño doesn’t add new heat to the planet. It releases heat from the ocean, which is the warmest ever measured”[1]. 2026 is on track to be the tenth year in a row of record ocean warmth, and sea level is the highest on record and accelerating[1].

The update also counts what this year cost. Roughly 146.5 million people in India were exposed to an extreme heatwave in April, with temperatures of 47°C[1]. Provisional estimates put excess mortality in Europe this summer above 30,000, about 16,000 of them in the 22–28 June heatwave alone[1]. A glacier collapse in the Himalaya in late August caused a flash flood that killed more than 1,300 people in Nepal[1].

Three lines in the report’s highlights deserve more attention than they will get. For the first time, the World Health Organization has classified El Niño’s expected health impacts as a health emergency[1]. Water stored on land has declined globally since 2014; in 2025, 42% of the assessed area was below normal[1]. And El Niño is already raising risks for agriculture where farming depends on rain and food insecurity is high[1].

UN Secretary-General António Guterres called it “a new age of climate extremes”[1]. You may prefer the WMO’s drier phrase: El Niño as a “risk multiplier”[1]. …

Continue in reading view →

WHAT TO WATCH

- The final State of the Global Climate 2026 report, due in March 2027.
- Whether El Niño becomes the strongest on record by December, as the WMO update expects.

DESK COMMENT

A thermometer has no opinions. That is why it is worth reading.

Lake Powell up 20 feet, still just over a quarter full

Autumn floods in the US Southwest refilled reservoirs faster than this year's snowmelt did. The water managers are pleased, and are changing nothing until April.

Storms in late October and early November sent torrents through normally dry creeks across the US Southwest, flooding communities and forcing hundreds of evacuations[1]. They also did what last winter’s thin snowpack did not. Lake Powell, the second-largest reservoir in the United States, has risen more than 20 feet (6.1 metres) from its mid-September low, dwarfing its gains from this year’s snowmelt, according to hydrologist Martin Hoerling of the University of Colorado[1].

Keep both halves of the sentence. The lake is still just over a quarter full, and 15 of its 17 boat launches were unusable on Friday[1]. …

CLIMATE & WEATHER · BRIEF · EPAPER EXTRA, ADDED 06:30 CET

80 mm where 30 were forecast: Erbil floods, and Storm Bruna heads for Portugal

Severe thunderstorms brought deadly flash floods to northern Iraq on Saturday[1]. In Erbil an estimated 80 mm of rain fell where 30 mm had been expected; streets flooded, homes and businesses were damaged, and two people were killed[1].

In Europe, Storm Bruna is forecast to bring gusts of up to 80 km/h to Portugal’s west coast this week, with heavy rain and thunderstorms and up to 200 mm of rain by the end of the week; Tenerife recorded a gust of 80 mph on Saturday night[1].

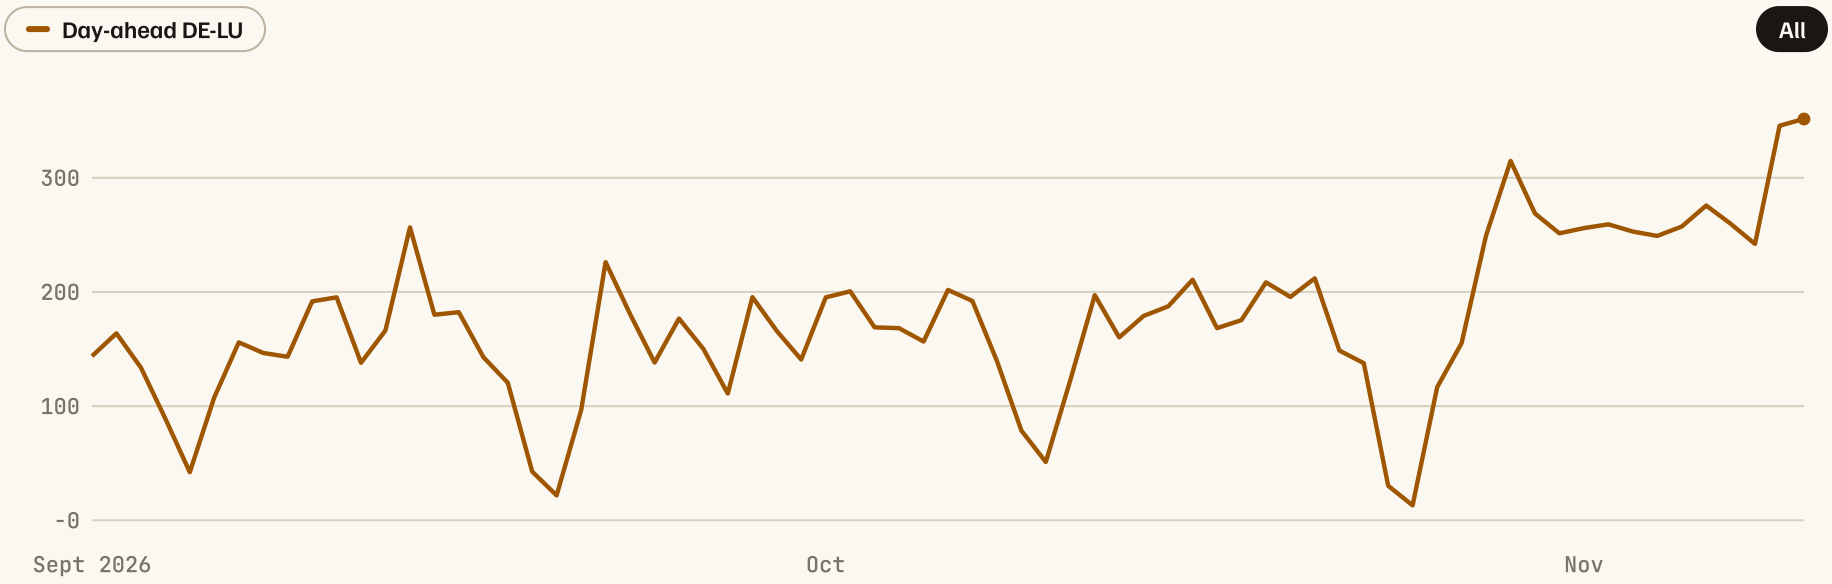

Japan is going the other way: Sapporo was forecast to sit about 10°C below average early this week, with a high of about 0°C on Tuesday and 30–50 cm of snow expected around Kiroro and Niseko[1]. Meanwhile, with Pacific sea temperatures about 3.5°C above average at their late-October peak, Peru has run 5–10°C above normal[1]. A forecast that misses by 50 mm is a reminder why warning systems need margins.

Before you close the tab

THE DAY IN ONE SENTENCE

A vaccine passed its next gate, a lake rose twenty feet and fifty-three frogs went home: slow, careful work keeps paying off, usually without a sound.

ONE THING YOU CAN DO THIS WEEK

Find your electricity contract or your last annual statement and look for two dates: when your price guarantee ends and when you can give notice. Write both in your calendar, a month early. Most money lost on energy is not lost on the price; it is lost on a date nobody noticed.

A habit, not advice.

WHAT WENT RIGHT

When the Black Summer fires of 2019/2020 burned through East Gippsland in Victoria, scientists found southern giant burrowing frogs surviving as tadpoles in pools "no larger than a puddle", in the words of herpetologist Matt Clancy [1]. In 2021 the tadpoles went to Healesville Sanctuary; keepers raised them, and last year bred the critically endangered species in captivity for the first time [1]. Now 53 frogs, each roughly the size of a cricket ball, have been released back into the forest, with song meters listening for their call [1]. There are fewer than five known breeding sites in Victoria [1]. "To know the species is going to continue … is just the best news we could ever hear as keepers," said Zoos Victoria's Meagan Lane [1]. A puddle, a sanctuary, a release: rescue is mostly patience with a budget line.

IN EUROS AT HOME

On 9 November the cheapest electricity tariff for new customers averaged 33.34 cents per kWh across Germany, against 40.39 cents in basic supply; at 3,500 kWh a year, switching from basic supply to the cheapest tariff saves €246.91 a year, StromAuskunft calculates [2]. The spread is very uneven: the possible saving is €657.25 in Thuringia but €41.46 in Bremen [2]. And the gap has narrowed: a year ago new-customer tariffs cost 24.82 cents and basic supply 45.47 cents, a difference of 20.65 cents; today it is 7.05 cents [2]. Desk arithmetic: €246.91 a year is about €20.58 a month.

StromAuskunft averages for 9 Nov 2026 across 6,355 places at 3,500 kWh a year, with standing charges and new-customer bonuses netted in. Your own figure depends on your postcode, your usage and your current contract. Nothing here is advice.

SMALL WORDS

Preisgarantie (price guarantee)

A clause in an energy contract by which the supplier promises that the agreed price stays the same for a set period [2]. It is what turns a tariff into something you can plan with. StromAuskunft's daily price index only counts tariffs with a guarantee of at least 12 months and a contract term of up to 12 months, so the comparison is between offers that hold still [2]. The word to look for in the small print is the end date.
